

Super Protocol

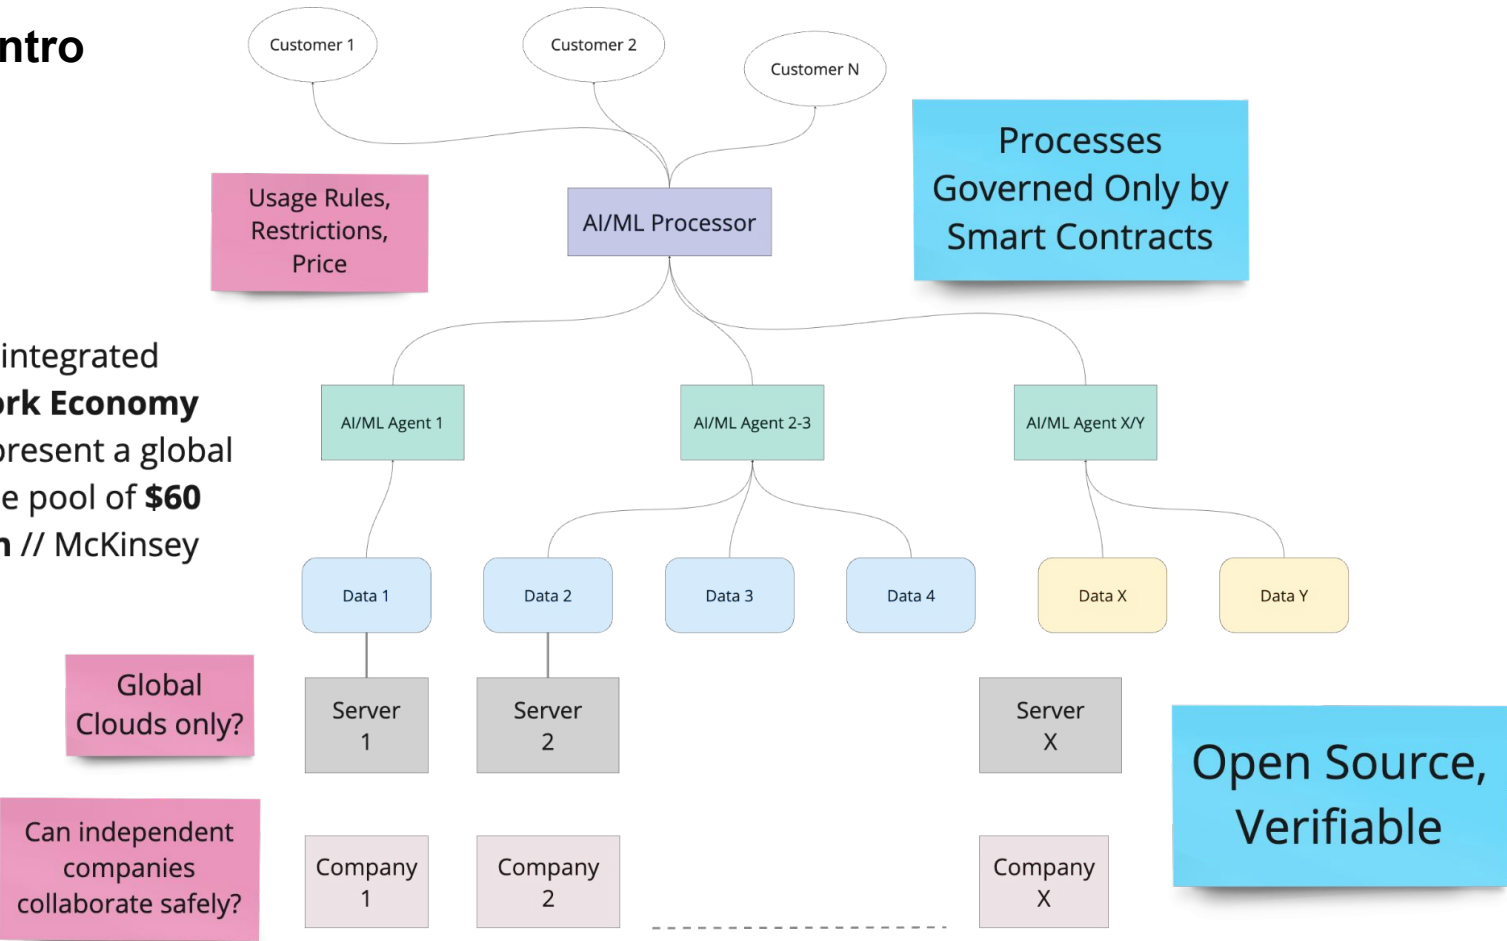

Confidential and Self-Sovereign AI cloud and marketplace

Nukri Basharuli, Founder and CEO & **Andrey** Pogoreltsev, CTO

Sept 5, 2024

Business Intro

The integrated **Network Economy** could represent a global revenue pool of **\$60 Trillion** // McKinsey

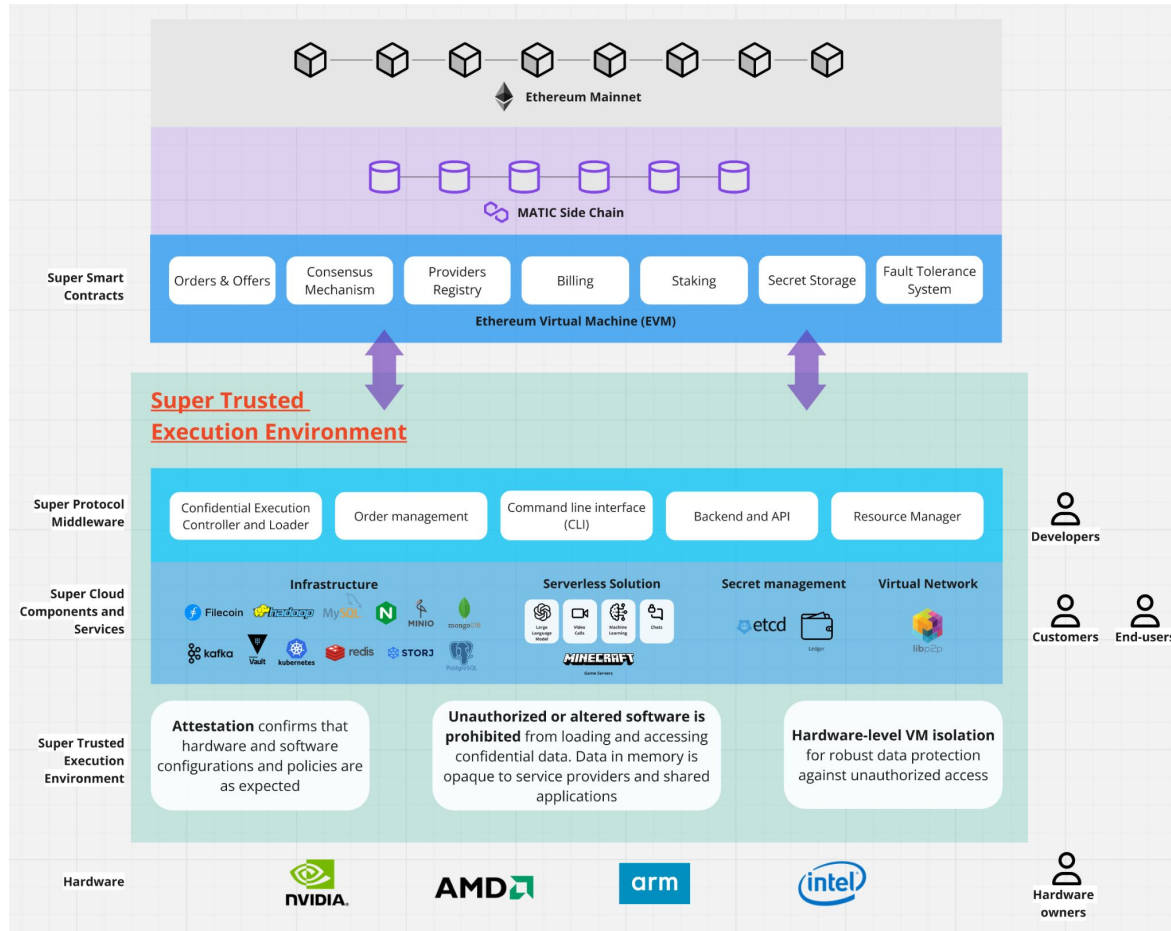

Super Tech Talk

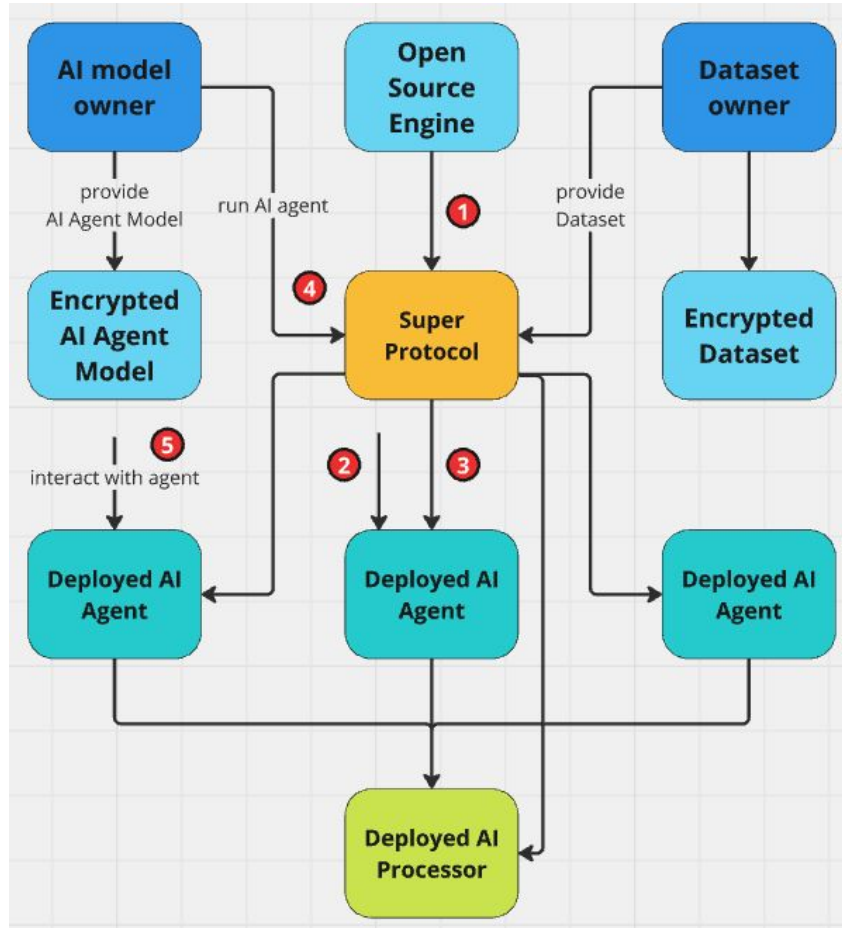

1. Super Protocol overview
2. Running AI Agents: scenario overview
3. Super Protocol key components

Super Protocol Overview

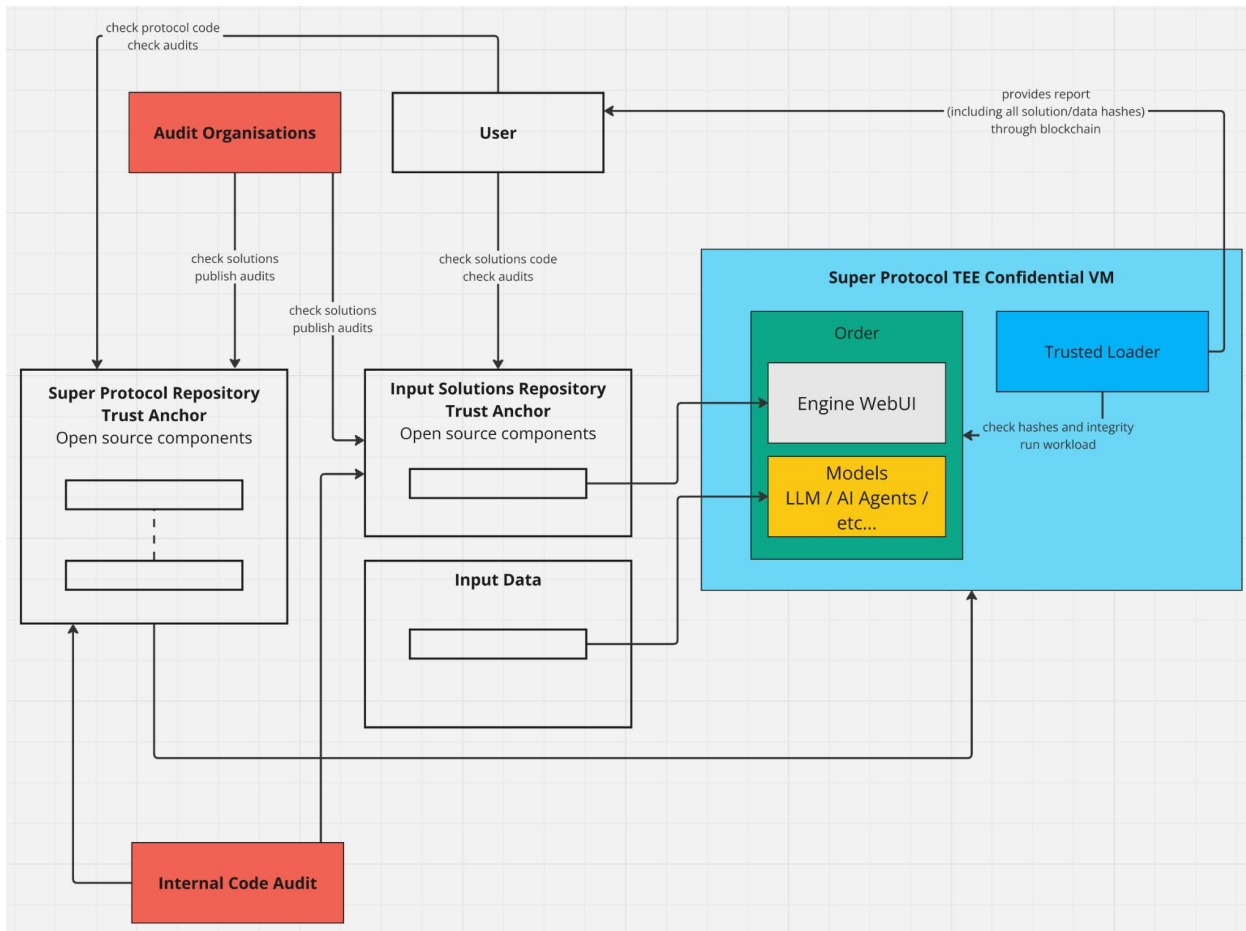

Running AI Agents

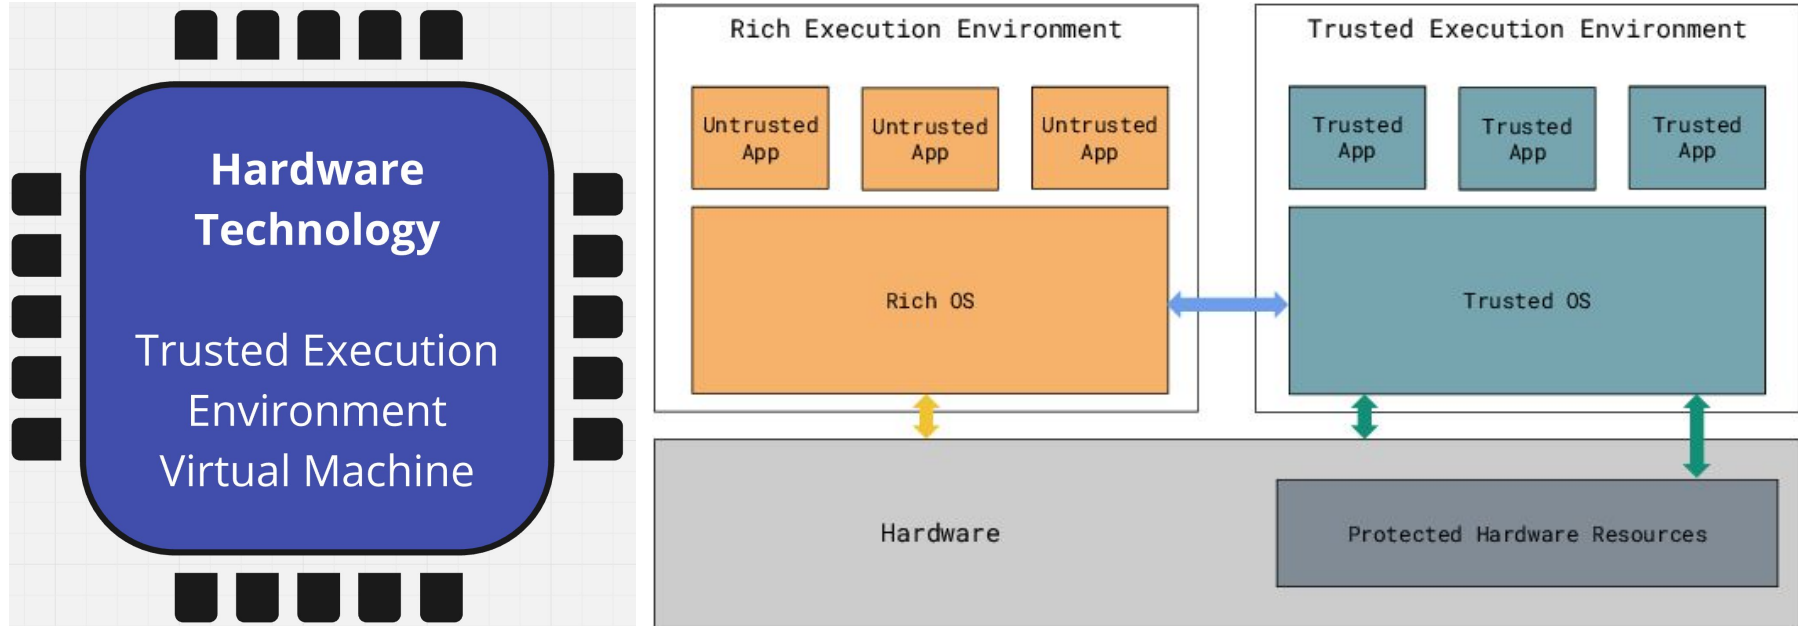

Important/critical points solved by Super Protocol:

1. **User access & audit of the code** of launched applications
2. **Control of access prohibition** to the solution and memory during execution
3. **Control of immutability** of launched applications and data
4. **Trusted launch report** and the **ability to generate reports by the applications** themselves
5. **Provision of attested access** to the launched solution

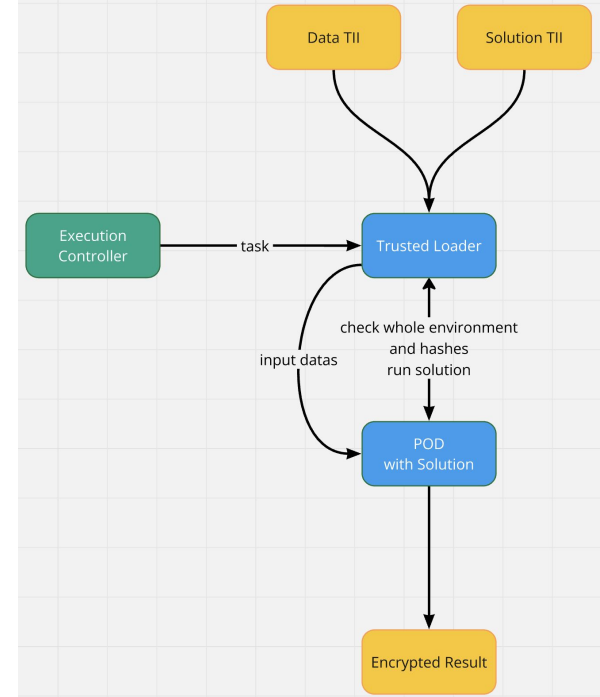

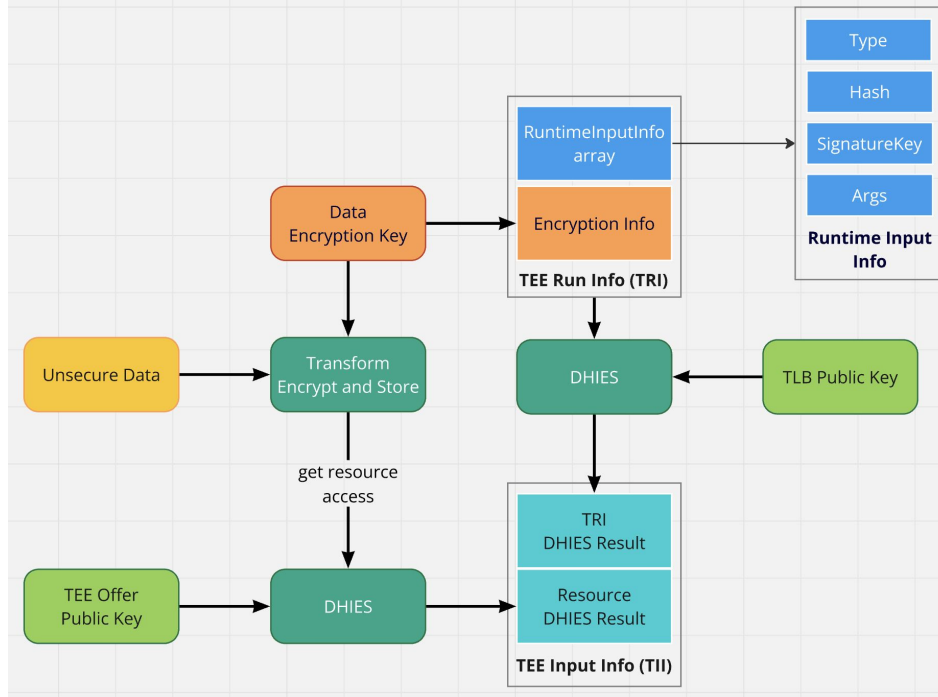

User Access & Audit of the Code of Launched Applications

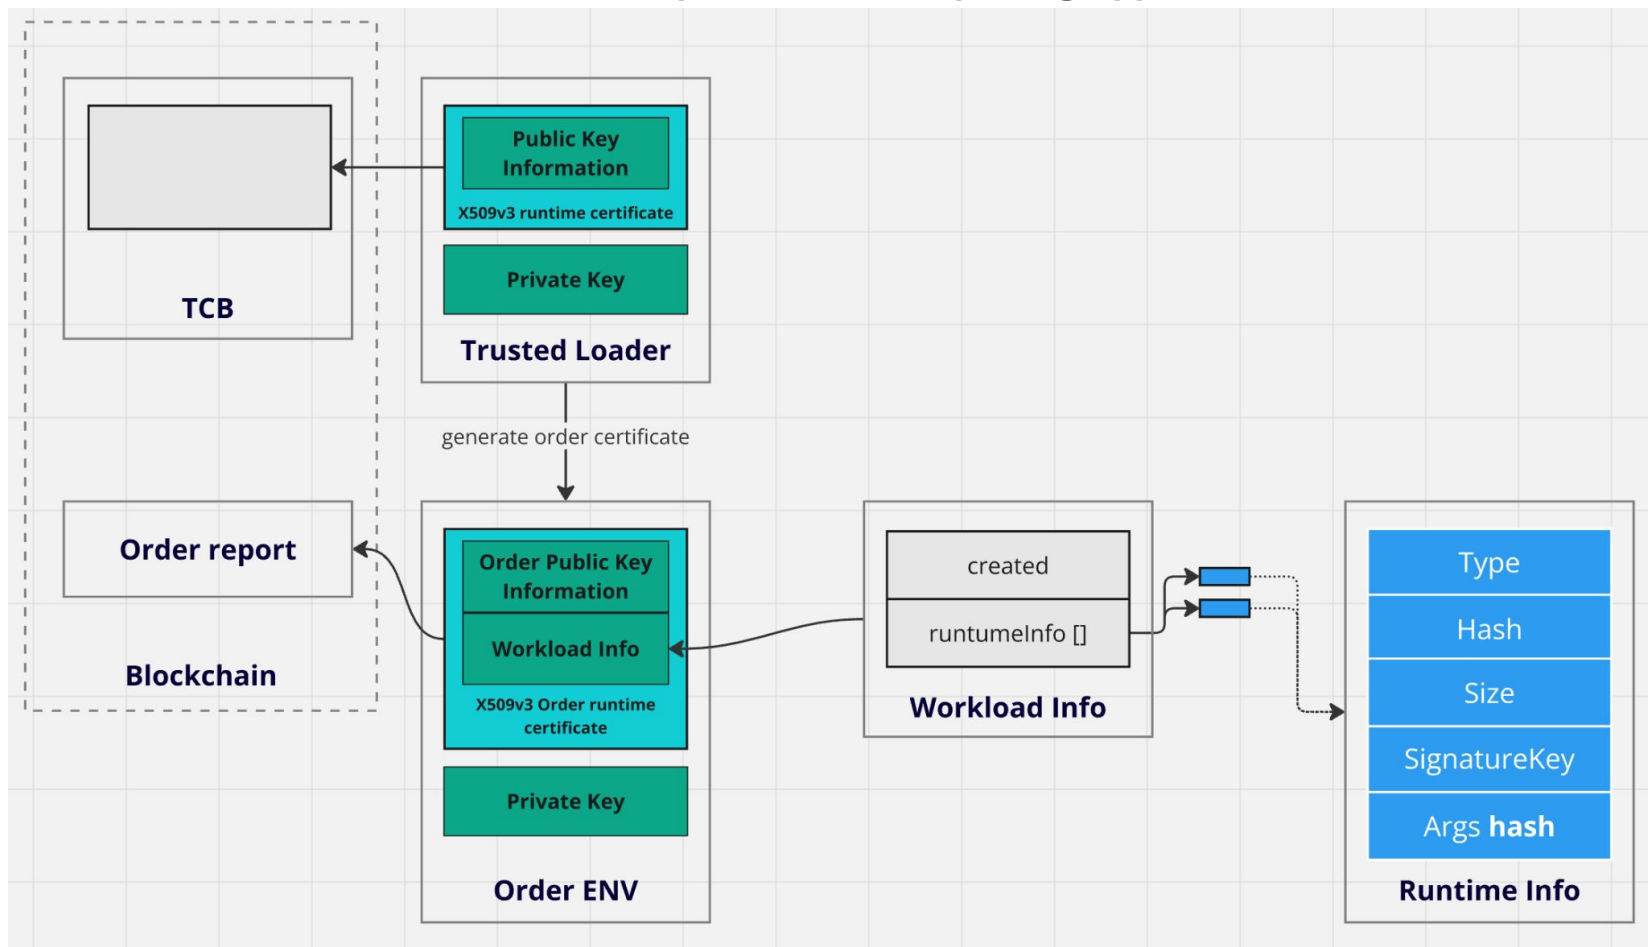

Control of Access Prohibition to the Solution and Memory during Execution

Control of Immutability of Launched Applications and Data

Trusted Loader Report and Self-Reporting Applications

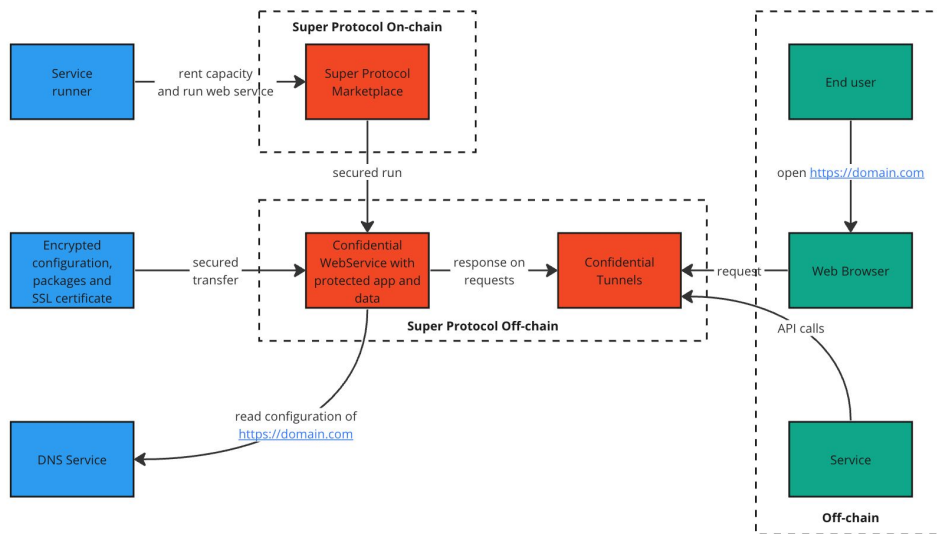

Provision of Attested Access to the Launched Solution

Confidential computing as a WebService
